

Suncoat Natural Hair Care Product Range

Suncoat Natural Hair Spray

PVP- Free and Alcohol-Free, Vegan

This one-of-a-kind hair styling product provides strong hold without using any chemicals. Synthetic resins such as PVP (polyvinyl pyrrolidone polymer), acrylate copolymer, VA (vinyl acrylic) copolymer, and acrylamide polymer, have been found in almost all “natural” hairsprays. They form a plastic film to hold hairs in place. These synthetic resins are petroleum derived, so are not the best choice to enhance your hairs’ natural beauty. When inhaled, this can cause health problems. Synthetic resins are not readily bio-degradable, and do not meet our eco-friendly needs.

Suncoat has chosen sugar-biopolymer (polysaccharides) instead of petroleum derived synthetic resins. Polysaccharides are essentially complex carbohydrates and act similarly to synthetic resins in terms of hold, without harming us or the environment. They are derived from natural renewable resources, readily biodegradable, a superior choice for your hair and the environment. Suncoat All Natural Hairspray is also alcohol-free which keeps hair from drying out. Suncoat All Natural Hairspray is not tested on animals.

Available in full size and travel size unscented.
